DeepBloom Demo Examination

Course: Introduction to Environmental Science

Duration: 2 hours Maximum score: 60

Answer all questions. Each question carries five points.

1. Define the term biodiversity.

2. List the three main greenhouse gases.

3. Explain why deforestation increases soil erosion.

4. Describe the role of decomposers in a food chain.

5. Calculate the carbon dioxide emitted by a car that travels 120 km at 0.2 kg per km.

6. Use the water cycle to show how a lake is refilled after a long dry season.

7. Compare solar and wind energy in terms of cost, reliability, and land use.

8. Analyze the causes of air pollution in a growing city and identify the main source.

9. Assess whether banning single-use plastics is an effective way to reduce ocean pollution.

10. Justify the choice of public transport over private cars for daily travel.

11. Design a plan to cut the energy use of your school by twenty percent.

12. Propose a community project that encourages recycling in your neighbourhood.
